

MUSC 352: Worship Media and Technology

Provides an introductory approach to the application and problem solving of live audio, video and lighting in the context of a worship service; to ensure sure that the worship and the word is heard and understood in a clear and precise manner; visually capture the ministry that is happening, creating an atmosphere for those in the auditorium, as well as broadcasting it to people around the world and on the internet; visually impact how worship and the word are experienced by painting the air in the room through various professional lighting fixtures and effects. Topics include what/where/why/how of digital sound boards, PA systems, stage set up, lighting fixtures and controllers, live streaming, service flow, communication with tech teams vs. worship team, IEM (in ear monitoring) and more.
